Education

Amrita Vishwa Vidyapeetham — *B.Tech in Computer Science* *Aug 2023 – April 2027*

- CGPA: 7.54/10

Experience

Software Engineer Intern — *Precision Biometrics* *Apr 2026 – May 2026*

- Contributed to proprietary Python applications for biometric hardware products; diagnosed and resolved bugs in a production codebase.
- Gained hands-on experience with production engineering practices such as code review cycles, team workflows, and maintaining stability in software shipped to end users.

Projects

Legal RAG — *Contract Intelligence Platform* *GitHub Repository*

- Built a modular RAG pipeline for legal PDF analysis: clause-aware chunking preserves section boundaries, FAISS indexes persist across sessions, and a cross-encoder reranking step validates top-k retrievals for higher precision before passing context to Llama 3.3-70B via Groq.
- Implemented four analysis modes — plain-English Q&A with clause-level citations, severity-tagged risk scanning across 10+ clause types (Indemnity, Termination), prioritised executive worry list, and semantic diffing between contract versions to surface changed obligations.
- **Stack:** Python, FastAPI, LangChain, FAISS, PyMuPDF, React + Vite

GrowingPlate — *Children's Nutrition Monitoring Platform* *Deployed App*

- Architected a full-stack pediatric nutrition tracker covering 30+ nutrients against age- and sex-specific RDA targets; designed a relational PostgreSQL schema with Row Level Security enforcing strict per-family data isolation.
- Built a zero-dependency TypeScript nutrition engine handling gram conversion, per-item nutrient computation, and a four-tier severity alert system — processes a full day's intake in under 50 ms client-side.
- **Stack:** Next.js, Supabase, Tailwind CSS, shadcn/ui, Recharts, Framer Motion, Zod

KeepAlive — *Decentralized Dead Man's Switch* *GitHub Repository*

- Engineered a trustless asset-inheritance protocol in Solidity: a proof-of-life `ping()` resets a time-lock, and a beneficiary-pull `claim()` releases funds once the epoch lapses — no lawyers, no custodians, no single point of failure.
- Achieved 100% branch coverage across 20+ unit tests with Mocha/Chai; gas-optimised storage layout reduces deployment cost by avoiding redundant SSTORE calls.
- **Stack:** Solidity, Hardhat, Ethers.js, Mocha/Chai

Schedula — *Academic Scheduling Platform* *GitHub Repository*

- Implemented a constraint-satisfaction backtracking engine that generates clash-free timetables for 150+ courses and 30+ rooms in under 5 seconds, automatically resolving faculty workloads, consecutive labs, and parallel elective conflicts.
- **Stack:** Django / DRF, PostgreSQL, React + Vite, pytest, GitHub Actions

Technologies

Languages: Python, JavaScript, TypeScript, C, C++, SQL, Solidity

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, Framer Motion

Backend: Node.js, Express.js, Django, FastAPI, LangChain, REST API Design, JWT Auth

Data & Infra: PostgreSQL, MongoDB, Supabase, FAISS, Docker, Git, Vercel, CI/CD

AI & Web3: LangChain, FAISS, PyMuPDF, Groq, Solidity, Hardhat, Ethers.js
